

Name: _____

OUR CLIMATE OUR FUTURE VIDEO QUESTIONS		
Chapter 1: Welcome		
1. What do the hosts think is the most epic challenge your generation faces?		
2. Who will likely be the most affected by negative effects of climate change?		
Chapter 2: Living Large		
3. Name four examples of how we take up space that we cannot see directly.		
4. How many football fields worth of Earth's resources does the average American use to live?		
5. How many Earths would we need to have enough resources if everyone lived like Americans?		
6. Living large uses a ton of energy, mostly produced from burning, in the forms of,,, and		
7.We now know that burning fossil fuels is causing Earth's temperature to		
Chapter 3: Fossil Fuels and CO₂		
8. Which element is the main ingredient of life?		
9. What is produced when you burn carbon (which is contained in anything that is or was living)?		

	10. Why are coal, oil, and natural gas called fossil fuels?	
	11. What were the conditions 300 million years ago that eventually formed coal, oil and natural gas.	
	12. About% of the energy used today comes from fossil fuels.	
	Chapter 4: CO₂ and Climate Change	
	13. The atmosphere is made up of gases, mostly and, with	
	small amounts of	
	14. Greenhouse gases (GHGs), like,,,	
	, and, make up less than% of the Earth's	
	atmosphere.	
	15. GHGs block from leaving the Earth's atmosphere in a process called the	
	·	
	16. Why is it good to have some GHGs in the atmosphere, but not too much?	
	17. Over the last 800,000 years before humans existed, CO ₂ levels in the atmosphere have	
	stayed below PPM (parts per million). Today, CO ₂ levels are over PPM.	
	18. Higher temperatures cause the Earth's cycle to go into overdrive, causing	
	weather to become more	
	19. Based on the map in the video, circle below how climate change is impacting where you live?	
	Losing permafrost sea levels rising worse heat waves severe droughts	
more destructive storms and hurricanes flash floods bigger wildfires		
	more spread of diseases worse pollen allergies	

Chapter 5: Real World Impacts 20. Explain how the young people in the video feel they are being impacted by climate change. a. Tonyisha (Chicago, IL): b. Brandon (Kennesaw GA): c. Gabriella (Miami, FL): Chapter 6: Is it Real? 21. Climate has changed naturally throughout history, but how is climate change today different? 22. If climate naturally changes slowly, it gives organisms more time to ______. 23. What percent of climate scientists agree that humans are causing climate change? 24. Why might some try to convince people climate change isn't happening regardless of the science that shows that it is?

Chapter 7: The Big Picture

25. Summarize some key take-aways from this chapter.

Chapter 8: The Solutions

26. To protect ourselves against the worst effects of climate change, scientists said that we shouldn't allow global temperatures to go above _____°C and we've already gone up about ____°C.

27. Most fossil fuels are burned to produce	_ and		
28. Fossil fuels are usually burned to produce steam to turn a turbine for energy production. What are two different ways to turn a turbine to generate electricity without using fossil fuels?			
29. How can we burn fewer fossil fuels in relation to our transportation?)		
30. Why are wind, water, and solar power called renewable energy?			
31. What are two ways that you could use less energy?			
32. Switching over to renewable energy can create more well-paying job with fossil fuels. Name a possible green career from the video or anothe think of.			
33. What can you say about the cost of renewable energy now?			
Chapter 9: The Movement			
34. What's the name of the global climate agreement to keep global tem 2°C that was signed by many countries in 2015?	nperatures below		
35. Which story of action or example of green technology stuck out to yo	ou the most?		
Chapter 10: Do One Thing			
36 Individual actions add up Name two things you can do to fight clima	ote change in vour		

daily life.
